

Want to Improve mark / Continue to experience success in Math? IT IS NOT TOO LATE

STARTING **RIGHT NOW.. TODAY...** WITH NEW UNIT can be a NEW BEHAVIOUR. do this **EVERY DAY** for **2 months**
(then do this right from the start of next year's Math course!)

Continue to repeat above with each skill covered in homework until you are confident at that skill. EVERY DAY.

You might not need to do all questions assigned if you're able to easily get 3 or 4 or 5 in a row correct.

Or more likely need to carry out this process for every question assigned.

Once finished all homework, self **assess**:

- Did you need to get help or look at notes with every question?
- Did you struggle with every question, or take a long time with each question?

If either of the above are true, you will need to now do a few more practice questions until you're able to easily get 3 or 4 or 5 in a row correct.

1. Do the above to **maintain strong marks** or to hopefully **start getting better marks**.
2. Review/learn chapter 3, 4, 5 so that you can get **full marks on future review sections of test** and so that you can get strong marks on that half of the **final exam** (which is worth 30 % of final mark). Suggestion: start with your **previous tests and quizzes**. For each question that you got wrong, ask for help, if needed. Then do practice questions (using above method). **See me if you feel you've learned some skills from those chapters and would like to try an accountability check or a quiz.**
